

SOFT DIVIDER

This elegant cabin class divider from Jamco America offers a subtle distinction between cabin zones while still providing an open cabin feel.

The Jamco Soft Divider provides modest separation, greater cabin zone customization and enhanced airline branding capabilities.

Flexible and soft to the touch, it can accommodate different seat pitches without the worry of head-strike.

The Jamco Soft Divider provides a lightweight, flexible solution that offers zone separation with minimum passenger and cabin intrusion.

Our narrow-body aircraft design will not restrict seat recline, while offering minimal encroachment into the space of other passengers.

The Jamco Soft Divider can be formed to follow the contour of the seat back in the reclined positions.

The leather-like wrapped divider design offers simple elegance with branding opportunities through the use of color and embossed logos.

Our divider can easily be installed onto the OEM class-divider header by the airline's maintenance team.
